

## How to Series (14)

How to Series

**Collection Created: July 26, 2013**

### **Protect Your Business from All Natural Hazards**

[Go to Resource](#) Protecting your business from disasters caused by natural hazards can involve a variety of actions, from inspecting and maintaining your buildings to installing protective devices. Most of these actions, especially those that affect the structure of your buildings or their utility systems, should be carried out by qualified maintenance staff or professional contractors licensed to work in your state, county, or city. One example of disaster protection is safely storing the important documents, electronic files, raw materials, and inventory required for the operation of your business.

### **Protect Your Property from an Earthquake**

[Go to Resource](#) Protecting your property from earthquakes can involve a variety of actions, from inspecting and maintaining your building to installing protective devices. Most of these actions, especially those that affect the structure of your building or its utility systems, should be carried out by qualified maintenance staff or professional contractors licensed to work in your state, county, or city. One example of earthquake protection is properly anchoring heavy equipment.

### **Protect Your Property from Fire**

[Go to Resource](#) Wildfire protection can involve a variety of changes to your house and property -- changes that can vary in complexity and cost. You may be able to make some types of changes yourself. But complicated or large-scale changes and those that affect the structure of your house or its electrical wiring and plumbing should be carried out only by a professional contractor licensed to work in your state, county, or city. One example of wildfire protection is removing vegetation, yard debris, and other combustible materials that may be near your house. This is something that many homeowners can probably do on their own.
